# Important Notice

---

This document and information contained herein may not be sent and or addressed wholly or in part, directly or indirectly, to any person in the United States or the People's Republic of China, or any other jurisdiction in which it would be impermissible or restricted to offer, distribute, purchase, sell or retain cryptographic tokens.

All definitions contained in this notice shall bear the same meaning as provided in the Whitepaper unless stated otherwise.

The Xtreme Token is not intended to constitute:

- securities in any jurisdiction;
- currency of any kind;
- stocks, shares or debentures;
- units in a collective investment scheme or business trust; or
- equity in an investment fund

Any regulation or legislation applicable to securities or to any of above will not be applicable to this Whitepaper. This Whitepaper does not constitute a prospectus or offer document, nor is it an offer of securities or an attempted solicitation for investment in securities in any jurisdiction. This Whitepaper and the Xtreme Token have not been approved by any regulatory body in any jurisdiction. It should not be assumed that the Whitepaper, and the Xtreme Token Offering complies with any laws, regulation or legislation of any jurisdiction.

No warranty, guarantee or undertaking is made by Xtreme Foundation and/or the distributors of the Xtreme Token regarding:

- the performance of the Xtreme Token ;
- the performance of the assets underlying the Xtreme Foundation business or the token purchase;
- the accuracy of the information contained in this Whitepaper;
- the accuracy of the financial or other projections contained in this Whitepaper

The law and regulation of token offerings is in the process of development and review in most jurisdictions. This lack of clarity surrounding the law and regulation further increases the risk associated with the Token purchase.

As a potential purchaser it is assumed that you have familiarized yourself with the underlying technology and workings of token purchases, blockchain technology, digital wallets and cryptocurrency. It is assumed that you as a potential purchaser have knowledge and understanding of the foregoing and that you have familiarized yourself with the risks associated therewith.

Any agreement between you and Xtreme Foundation and/or any distributor, in relation to the sale and purchase of the Xtreme Token will be governed by a separate Token Sale Agreement setting out the terms and conditions of such agreement. In the event of any inconsistencies between the Token Sale Agreement and this Whitepaper, the Token Sale Agreement shall prevail.

To the maximum extent permitted by the applicable laws, regulations and rules, Xtreme Foundation and/or any distributor shall not be liable for any indirect, special, incidental, consequential or other losses of any kind, in tort, contract or otherwise (including but not limited to loss of revenue, income, personal savings or profits, and loss of use or data), arising out of or in connection with any acceptance of or reliance on this Whitepaper or any part thereof by you and any purchase of the Xtreme Token by you.

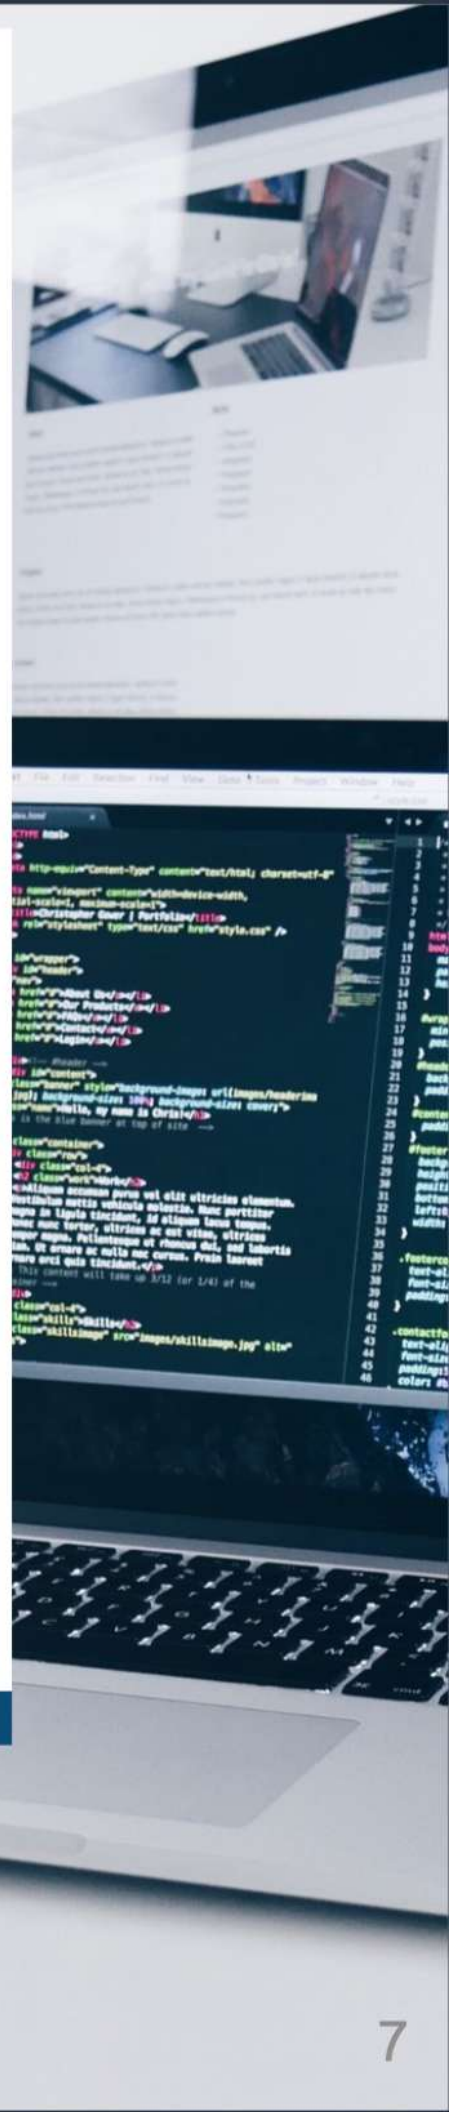

# Abstract

Xtreme Token (XTR) is a utility token based on the Binance Smart Chain (BEP-20 Standard) creating its own ecosystem comprised of reputable institutions like Government, Banks, Securities, Insurance, Hospitals, Universities and many more by building the next generation of Finance and Payment Solution for them with faster money remittance and frictionless value exchange of securities, medical records, academic data, and insurance in a pretty much decentralized manner leveraging tools of Decentralization like Blockchain.

Given the impact of blockchain and surrounding technologies, the inevitable evolution of XtremePay is an upcoming cross border payment solution enabling P2P transfers. The platform will become a network that utilizes open source protocols, smart contracts, and developments in distributed ledger and other decentralized data structure solutions. As part of this revolutionary solution of its proven business model, xtremepay will transform into a p2p ecosystem based on an utility access token and micro-transactions. The xtremepay platform will reward its participants for every contributive economic activity they perform.

What distinguishes XTR from 1000s of other Utility Token out there in the market is the ecosystem XTR is building from scratch that gives the real utility value for its token.

# Introduction to the Foundational Concept

---

For centuries, human civilization has been manipulated and dominated by Centralized Power in different aspects of their life. From finance, politics to accessing our day to day essentials on the internet today. Looking back in history, these centralized entities have always done a terrible job when it comes to working in the favor of the public's best interest.

For making payments, we have to trust the intermediary entity like the Bank which end up accruing most of the value for themselves. For accessing services on the internet, we have to give away our sensitive data, on which the internet platform monetizes by selling them to the advertisers making billions of dollars in revenue for themselves.

Moving further, we couldn't entrust these central entities with our data for accessing services on the internet, we couldn't trust financial institutions like banks which operate in closed ecosystems accruing most of the value for themselves. After all, It's quite a terrible idea to trust a single group, corporation, institution or a company with our finances, data, and relying on them to access our daily needs. Because, being centralized, they could misuse, take off much of the value for themselves, ban from using their platform anytime they wish to.

That's where we need an alternative. Taking away power from a single group or entity and putting them in the hands of the ones who actually deserve – the community, where decision making is in a very much democratic fashion, the value of any ecosystem goes to the builders and creators of the ecosystem and not to a single group or an individual.

## Bitcoin

It all started in the year 2008, when an anonymous person or a group named Satoshi Nakamoto published a Bitcoin whitepaper titled "A Peer-to-Peer Electronic Cash System" and released the open source protocol that allowed anyone to transfer funds (Cryptocurrency) across the globe without intermediary and centralized entities in the middle.

The overall idea of Satoshi was to build a payment system which is not controlled by an individual or an institution or a single group, cut off the middle-man and require no permission when it comes to transacting globally with the world.

Satoshi leveraged existing technologies like Blockchain, Ideology of Cryptography, Economics and Proof-of-Work (PoW) consensus mechanism to achieve this. It's been more than a decade now and Bitcoin has come so far without any centralized entity. It has changed the overall landscape of finance and money.

## Ethereum :

Vitalik Buterin the co-founder of Ethereum saw the broader impact of Decentralization outside of finance. He went on to build the second largest Blockchain Protocol – Ethereum, in which he introduced the functionality of Smart Contract that allowed the building of various Decentralized Applications.

16:45  
Mittwoch, 20. Februar

The Ethereum Protocol made it easy for everyone to build Decentralized Application. It gave birth to different standards (ERC-20, for the creation of Fungible Tokens, and ERC-721 for Non-Fungible Token) that allowed the creation of 1000s of Cryptocurrencies in the ecosystem.

It gave birth to different other concepts like Decentralized Finance, Decentralized Exchange, Decentralized Autonomous Organizations – which is reinventing the whole different areas outside of finance.

## WEB 3.0

In the year 2014 – Gavin Wood, the co-founder of Ethereum coined the term Web3. Web3 is actually the third iteration of the World Wide Web. The overall ideology of this iteration of the Web is to get back to its root of Open Source, Decentralized and Community Governed. Taking away power from the centralized entities and putting the power back to the community, builder and creators in a very much decentralized manner.

The very first version of the World Wide Web was Open Source Standard Protocol, Decentralized, Community Governed. But the advancement in technology allowed startups to build a robust infrastructure of the Web in a pretty much centralized manner and today's few companies are controlling and dominating the whole internet.

Web3 leveraging the tools of Decentralization to again get back to its foundational root.

# Challenges and Market Opportunities

---

The overall ecosystem is full of challenges and thus limitless opportunities for people like us to build the next generation of products and services for this ecosystem. Some of the major challenges and how we see them as opportunities for us:

## Immaturity in Technology

First and foremost, the ecosystem is still in an evolving stage and has not yet matured completely. The development of new technology, ideas and concepts are popping up quite often on a regular basis and it's quite challenging to keep up with them and experiment them in our products and services.

Even though it's challenging to keep up with new tech evolution, we have kept that in very much of our priority and experiment with most of them in our products and services to make it more powerful.

## Utility Tokens Lacks Real Utility

There are thousands of tokens out there in the market in the name of "Utility Token" but they actually don't have proper utility value that users can leverage to benefit from. Having Utility Token isn't enough, it doesn't take much to build it. The real deal is to have an ecosystem full of use cases of that particular token.

XTR is more than just a utility token. We have been building the whole XTR ecosystem comprising reputable industries that eventually gives great utility value for our users, holders and investors.

## Mass Adoption

Mass Adoption has been the topic this ecosystem discusses more often on. There are two major things that we see stopping this ecosystem to go mainstream.

1. Knowledge Gap
2. Products and Services that solve Real Problems

We believe that it's our job to help push this ecosystem forward to go mainstream. We have another vertical of XTR for educating the masses about Blockchain, Crypto and Web3 in general. With the academic verticals of XTR, we want to educate people to not just understand this ecosystem but be a part of it in a way to get most out of it.

## Market Volatility

Price fluctuation has been the biggest challenge and barrier for most of the traditional investors to be a part of this revolution in a way to make good decisions with their money. The market volatility is so high that it's quite hard for them to make sense of it. For example, in 2021, the market capitalization of crypto hit \$2.7 Trillion reaching an all time high, where the value of a Bitcoin hit USD\$69,000.

With XTR, we aim to help these traditional investors get into this ecosystem in a very easy and seamless way and help them gain great exposure in this ecosystem at the same time helping them make good decisions with their money to gain the most out of this ecosystem.

## Limited Use cases

As mentioned earlier, Utility Tokens which are 1000s in numbers out there in the market which doesn't really have a proper utility that their holders can leverage to benefit from.

XTR doesn't want to be the other one in that list. This has been our mindset since the beginning of the project. That's why, we have been building the whole ecosystem of institutions from government, hospitals, travel, universities and many more that will give great utility value for XTR in different industries and its holders will have limitless opportunity.

## Cyber Security Threat

The biggest challenge the crypto and blockchain industry is facing today is cyber security threats and hacks. As everything is open source, technologies are immature, and limitless money being poured in so many projects in this ecosystem, the cyber attacks are seamlessly high.

We at XTR have a dedicated team of Cyber Security Experts and solutions to prevent our ecosystem from hacks and threats.

## Legality and Regulations

The lack of clarity in legal and regulatory frameworks is one of the most significant challenges to the mainstream adoption of cryptocurrencies and the operations of digital asset exchanges in the industry. Nonetheless, we believe the development of global rules and regulations will allow for increased certainty and the legitimization of digital assets, which will in turn help bring the digital assets industry to global acceptance and mass adoption.

Our company is legally registered in Dubai.

# VISION OF XTREME TOKEN

The vision of the Xtreme Project is to introduce the new era of decentralization by redefining the meaning of communities and creating a new world by connecting such communities. Communities today are commonly defined by its social and political functions and limited to the economic boundaries set forth by world nations. Through Xtreme token, communities can go beyond and be free from the traditional economic system and promote frictionless value exchanges with other communities, eventually resulting in maximum total utility of society. Xtreme token is not limited to the real world, but it directly connects and communicates with the crypto world creating the most robust network that can scale without limits.

Xtreme token is a vision with a proven track record and has progressed beyond the initial concept stage. Xtreme token already boasts communities of reputable institutions – government, banks, securities, insurance, hospitals, universities, and more. A future with faster money remittance and frictionless value exchange of securities, medical records, academic data, insurance fees is within our reach.

# Introduction

---

The Xtreme Token (XTR) is a Utility Token built on top of the Binance Smart Chain BEP-20 Standard which is similar to that of Ethereum ERC-20 Standard for creating Fungible Token (i.e. Cryptocurrency). XTR is a digital asset traded native to the Xtreme Ecosystem comprising various reputable institutions like Government, Banks, Securities, Insurance, Hospitals, Universities and many more.

The Xtreme Token (XTR) is different from many other utilities tokens out there in the market in 2 main different ways:

## **Xtreme Ecosystem**

For any utility tokens to have real impact in the lives of its holders, users, and community in general – it needs utility for real world applications so that the users can redeem the tokens to use those applications.

For that reason, Xtreme choosed to create its own ecosystem bringing the essentials institutions and industries that everyone needs in their daily lives. So that the users and holders of the XTR tokens can leverage their funds to enjoy utilities across various industries within the Xtreme Ecosystem.

## **Xtreme Verticals**

Along with the Ecosystem Xtreme is building, it needs its own native tools, platforms and mediums through which XTR users could have seamless experiences when it comes to using it for their benefits.

XTR verticals consist of its own native Xtreme Pay, Exchange, Marketplace, Travel, NFTs, Metaverse, Academic and Foundation.

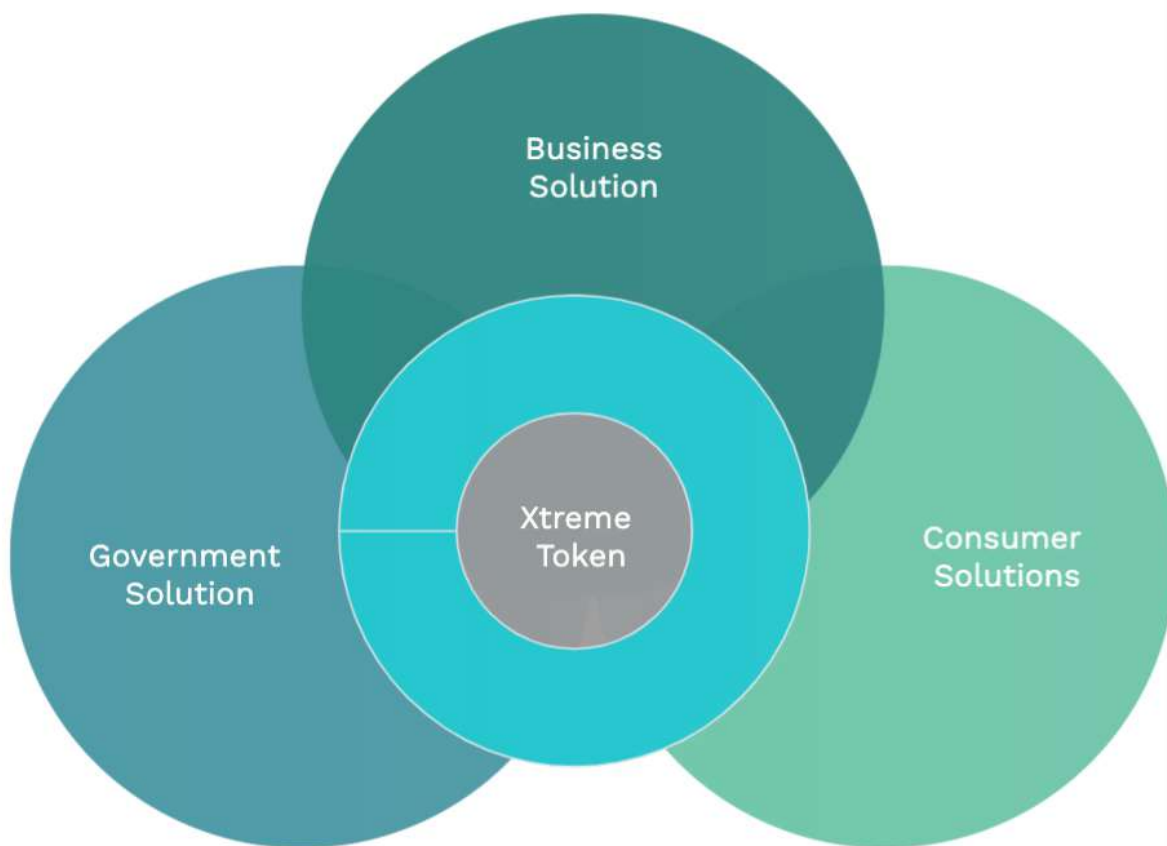

## **Xtreme Premises**

Xtreme with its own native ecosystem and multiple verticals wants to help its holders, users, and communities with the following:

1. Creating a new world by bringing communities from various disciplines for the exchange of value together in this new era of decentralization.
2. Open up possibilities of seamless trade, transact and transfer of value across the globe and beyond the borders.
3. Opportunities to enjoy real world utility of the tokens comprised various industries in the ecosystem and beyond that, also in the digital world across the globe.
4. Along with making payment aspects more seamless, it allows its users to earn interests and rewards by being part of different Xtreme Programs like Staking and Referrals.

# Xtreme Token Ecosystem

## We are progressing

We have already started working on implementation.

# Government Solutions

The government products under the Xtreme Ecosystem consists of the following verticals:

1. Digital Currency
2. Whitelabel Payment Solution
3. Voting System

For each of these products, Xtreme offers turnkey products for solving a wide variety of tasks in government. These solutions will drastically:

- Simplify government processes
- Increase government revenue
- Reduce crime
- Eliminate tax evasion & identity theft
- Bring complete control back to government executives

The core of the Xtreme ecosystem for government is the Digital Currency Platform. The Digital currency system hosts a nation's currency and allows absolute control and oversight by executives in government..

## Government Solutions

This platform gives every citizen of a nation the ability to access all major government services in one place. This platform is accessible on nearly every electronic device and operating system.

The powerful aspect of the Digital Currency Platform is the notification system. Every citizen will have access to the Digital Currency Platform from their phone, computer, tablet, smartwatch, or via SMS messages.

This notification system will allow authorized government personnel to publish nationwide notifications which will be sent to every citizen on all of their devices as well as an SMS text message.

The government using the Digital Currency Platform will also have the ability to create public polls to request input and gauge public options. Executives in Government will also have the ability to create public polls to request input and gauge public options. The proposed government polling system allows a nation to conduct nationwide polls, instantly with the push of a button. Where a traditional poll/vote would require thousands of employees and millions of dollars in Infrastructure.

## Government Solutions

The Tax System as a part of the Digital Currency gives the government the ability to seamlessly apply automatic tax payments to any transaction, account balance or specific action performed from any type of account. It should be noted that the described Xtreme ecosystem has a modular architecture. That means that the Digital Currency Platform may be fully implemented to the governmental system or partially. The level of implementation and integration will depend on the presented tasks.

The Business Solutions under the Xtreme Ecosystem consists of the following verticals:

1. Bank Transfer
2. Cross Border Transfer
3. Payment Gateway
4. Asset Management

Blockchain is the safest way to run any financial platform because it ensures absolute security and immutability. Its revolutionary technologies, such as sharding and adaptive forging, have made it not only the fastest but the safest financial platform on Earth.

Compared with Visa, the World's largest and most trusted payment processor, the advantages are clearly seen. Visa can take 15 to 30 seconds to process a transaction and is capable of processing 1,700 transactions per second. Xtreme Ecosystem, by comparison, is up to 30x faster with a transaction speed of subsecond to two Seconds. Its blockchain will soon be capable of more than 1,000,000 transactions per second, this is nearly 588 times the processing power.

The Xtreme bank transfer platform gives a central bank the ability to conduct instant payments to and from any bank in the network using local currency as well as foreign currency if needed. The platform can be used after a simple integration using the Xtreme Bank Transfer API or instantly by using the stand alone platform. Payments can be sent, received and tracked nearly immediately

- Payments can be sent to any international banks integrated in the platform. Funds can be sent in local currency only or exchanged instantly during transfer and received in a number of currencies
- Payments are made on a distributed database that is incorruptible, unhackable and cannot be manipulated

A payment gateway is a payment method that allows any bank or commercial entity to provide payment processing services for third party companies. That means that in a payment solution, the company uses it to accept payment for their business. By utilizing this payment system, a business can save a substantial amount of time and resources and gain access to technology that is not only proven but far superior to traditional platforms.

# Consumer Solutions

**Centralized  
Exchange**

**Travel Portal**

**Marketplace**

**Decentralized  
Exchange**

**Decentralized  
Finance**

**Merchant  
Solutions**

# Consumer Solutions

Xtreme ecosystem has its own developed marketplace for trading anything on a platform where Xtreme token will be used as payment. This will give the great benefits to the token holders to utilize the token in day to day life. The business can promote their business to get new customers and earn more benefits without any restrictions.

Xtreme Travel is the online travel platform for users to get flight, hotels and holiday packages. The major benefit of this platform is to connect users with direct service by eliminating the middleman, so it saves money and time for both service providers and users. Xtreme token proposes the centralized Exchange service to exchange the native tokens and others.

Xtreme DEX is a software package for the exchange of digital assets at peer-to-peer networks. Unlike traditional (centralized) exchanges, DEX does not have a single center acting as a guarantor of the transaction. In fact, assets are transferred directly from the sender to the recipient within DEX excluding third parties.

# Extreme Ecosystem Verticals

To make it easy for the holders, users and communities to enjoy most of the utility benefits of the token, it has built a diverse range of verticals inside its own ecosystem.

Xtreme Protocol consists of following verticals:

## **Xtreme Pay:**

A cross border Payment solution enabling p2p transfers and also made it easy for paying merchants using QR.

## **Xtreme Exchange:**

Web and mobile app with easy user experience for buy, sale and trader cryptocurrencies.

## **Xtreme Marketplace:**

The B2C marketplace for buying anything from the market using xtreme token and other crypto as payment.

**Xtreme NFT:**

Mint your NFT and sell from our NFT marketplace

**Xtreme Metaverse:**

The metaverse with the utilization of Xtreme NFT and Token.

**Xtreme Academy:**

We provide education on blockchain, cryptocurrency and trading.

**Xtreme Travel:**

Xtreme has integrated itself into different travel platforms in which Holders can use the XTR token to book flights, hotel, rental and other travel activities.

**Xtreme Foundation:**

We aim to create an extreme foundation where blockchain technology can be used for philanthropy as a social contract for all forms of social issues.

# Technology Behind Xtreme

**high transaction volumes, peer-to-peer transactions, effectively zero transaction fees, and a decentralized**

Xtreme Foundation will utilize the most advanced solutions available within blockchain and distributed ledger technologies, and some that will be introduced in later stages of R&D.

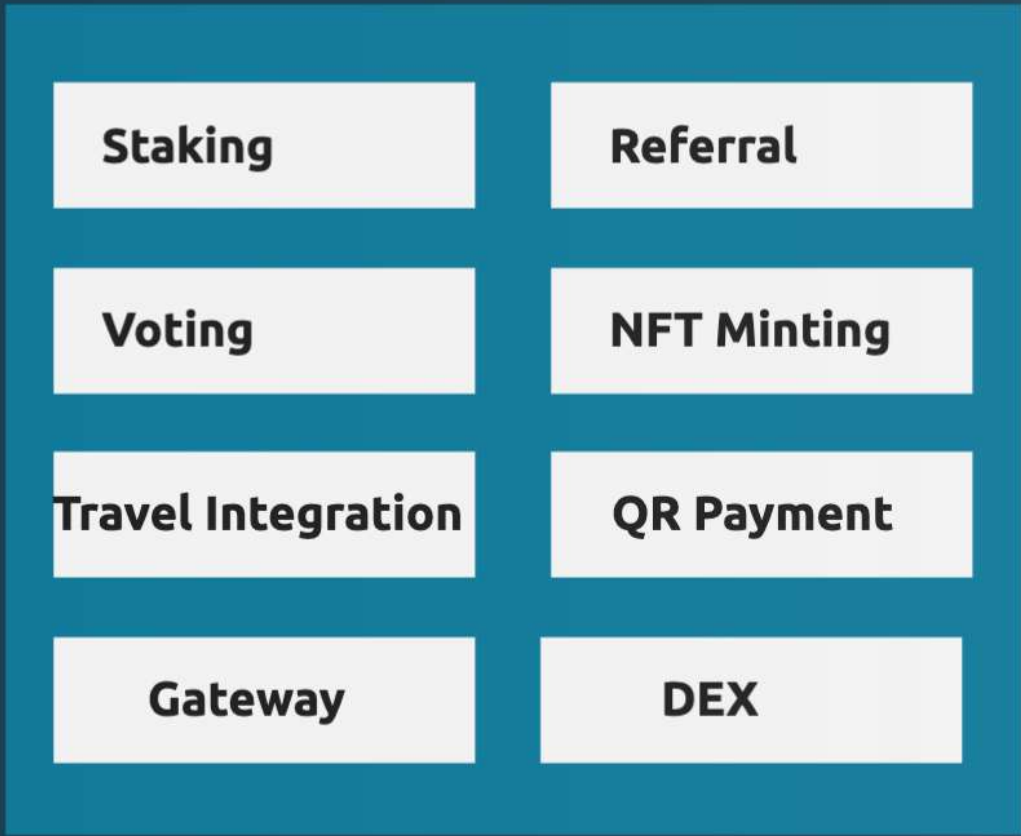

Our mission is to bring crypto-currency to the masses. Most of our business requirements are supported by the architectural drivers that binance smart chain has adopted for their mission: high transaction volumes, peer-to-peer transactions, effectively zero transaction fees, and a decentralized exchange. Beyond this, we also need to create standard features available to all transactions (with little to no friction) complex functions such as escrow or commissions, which are currently considered advanced features requiring high-friction and 3rd party integration.

XtremePay and other technology will build on top of Binance Smart Chain's standard capabilities and extend them with smart contract features can take advantage of these advanced capabilities without materially altering the way they do transactions.

**Xtreme Foundation will build the technologies with innovation, with the industry's past mistakes in mind.**

Xtreme Foundation believes addressing these issues as seamlessly as possible is what will break the loggishness that has prevented the widespread adoption of crypto currencies in general usage. Now, platforms and consumers no longer need to rely on centralized institutions to be able to provide new transaction options that offer the best of both worlds - cash & credit. Since Xtremepay enforces all these capabilities for free and in a completely transparent and decentralized manner, almost all transaction risk and overhead is eliminated making available all manner of new payment opportunities for the largest and smallest money transfer world wide.

**Application Layer**

**Protocol Layer**

**Blockchain Layer**

---

## SMART CONTRACT

Smart contracts are account holding objects on the Binance Smartchain .Smart contracts contain code functions and can interact with other contracts, make decisions, store data, and send BEP-20 tokens. Smart contracts are autonomous because each one can operate under different rules and, as such, eliminate any intermediaries. This is how full decentralization is achieved.

Xtreme Token uses binance smart contracts to create and execute orders with some additional conditions and rules. In particular, Binance smart contract allows the transfer of funds with confirmation from the recipient and to set a time limit for the entire procedure. A number of the most significant technical and ideological solutions that give Xtreme token a number of advantages have been considered above.

---

## CRYPTO WALLET

With the basic functions such as storage, withdrawal, deposit, and swapping between crypto to crypto and crypto to fiat to crypto. Our team aims to create a safe wallet for communities in which they can purchase physical products in real life by crypto.

Usually, a cryptocurrency is inaccessible to the majority of the world as it requires a bank account, computer, knowledge, and patience. At the same time, our crypto wallet promotes unparalleled mass adoption and crypto access. Our solution to this barrier is to initiate a decentralized network of individuals allowing anyone to download and purchase XTR, simply with cash/card/crypto. This will open up cryptocurrency to the vast majority of people without a bank account.

---

## QR PAYMENT

The app lets users scan a QR code with their smartphone, which initiates a payment. For example, people can scan a QR code at a shopping mall using their smartphone camera and make payment.

Xtreme token brings online and offline business on a network for payment acceptance and settlement. For easy usage, Xtreme Pay has the feature of QR payment where xtreme token holders/users can make direct payment to merchants accepting XTR tokens. This will give the great advantages to the business to store the crypto, and help saving cost/fee on transactions.

# Xtreme Platforms :

---

## **Xtreme Pay**

We have intended to launch the new blockchain-based money transfer solution empowering peer to peer decentralized platform that will set the new standard of transferring the money.

## **Staking**

The users can get the passive earning regularly for just owning the token. Staking is the reward based approach Xtreme token provides to users encouraging long term holding of a token.

## **P2P**

The platform enables the feature where you can directly buy sale tokens with others user with your proposed rate.

## **Merchant Payment**

Businesses can use the xtreme product to accept the crypto as payment service to accept payment from clients. It supports both online and offline/physical business.

# Xtreme Pay :

## Problem with current solution :

Sending the money is always challenges despite of paying high fee for service to these monopoly service provider. They harrash you with lots of document to identify yourself and your money with out assurity of when the money will reach to receipt.

*You can't control your money*

## Our Solution for You

We have intended to launch the new blockchain-based money transter solution empowering peer to peer decentralized platform that will set the new standard of transferring the money.

You are the owner, you control your money

Chances to earn more

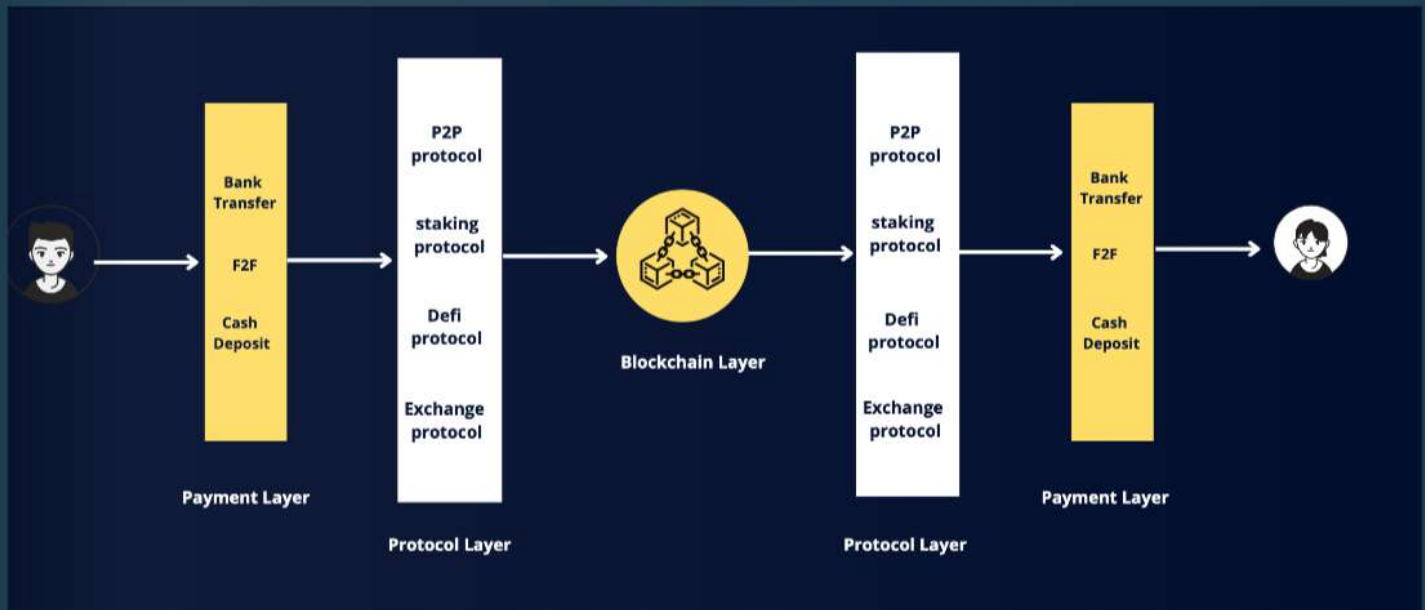

Borderless Payment

## Features :

- 1 Realtime Settlement
- 2 Low Service Fee
- 3 Your Exchange Rate
- 4 Peer to Peer Nrtwork

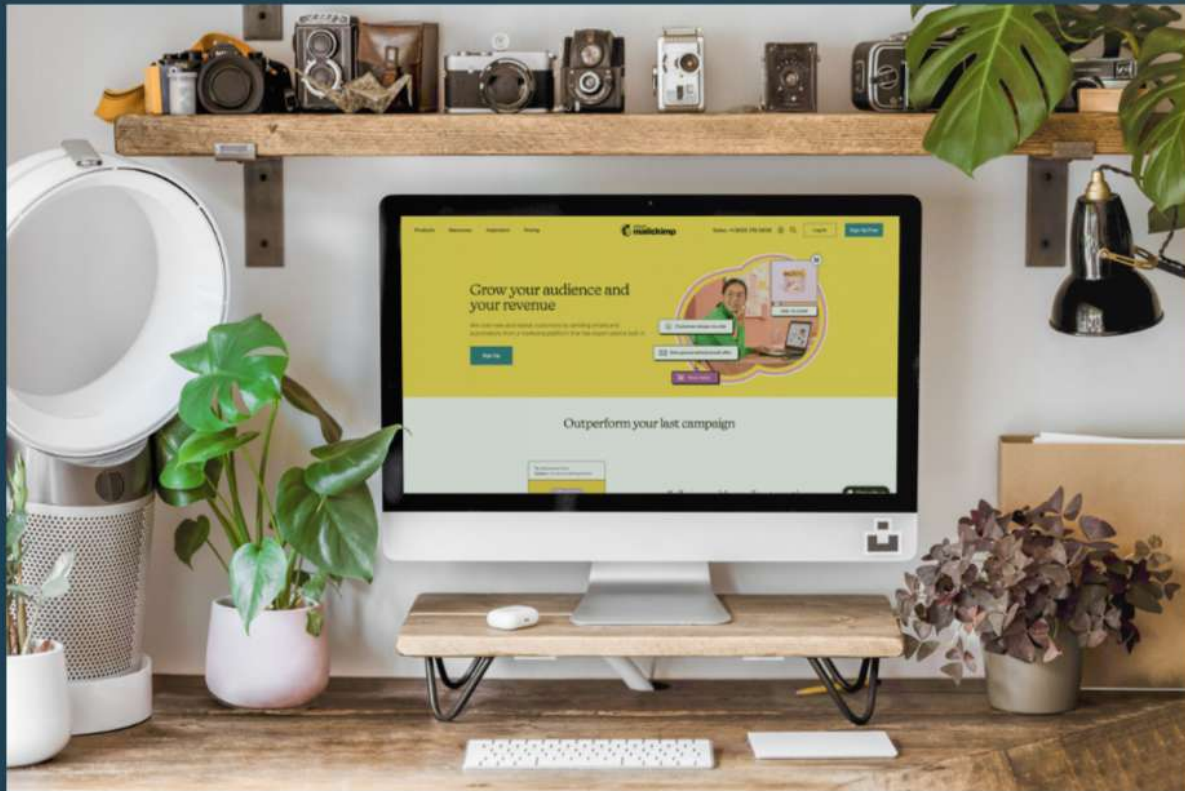

## Technology for XtremePay

## How to send Money?

# Roadmap of Xtreme Pay

## Timeline

### September

Project Details  
Announcement

### October

Airdrop Campaign  
Launch

### December

Product Launch

# Staking

The users can get the passive earning regularly for just owning the token. Staking is the reward based approach Xtreme token provides to users encouraging long term holding of a token. There are two type of staking program

## 1. Fixed term staking program

This is for the users who are looking for fixed terms of saving crypto and earn high yield. The users have to wait till the end of the locking period to withdraw.

## 2. Flexible term staking program

The Flexible term of staking program will promote a flexible time frame of withdrawal of the token. Users can cancel the staking tokens when they need to.

In general, fixed term staking has higher return of investment as compared to flexible term staking.

# P2P

The platform enables the feature where you can directly buy sale tokens with others.

The users can directly buy/sell \$XTR tokens to each other from the platform itself. It means users don't need to go to a third party or any exchange for it. Which will be the great benefits for:

- Users can set the price for their token.
- Peer to peer network in foundation for decentralization of our own blockchain for future.

## Merchant Payment

Businesses can use the xtreme pay product to accept the crypto as payment service to accept payment from clients. It supports both online and offline/physical business. The online platform can use the payment api on their website/mobile application for automation of payment service. The physical business can issue their unique QR payment card to show it with customers who want to make crypto payments. Users can use the app to make payment to merchants using QR scanner which settles on the realtime.

# XTREME NFT

Xtreme NFTs are the digital collectibles for the Xtreme Community.

Xtreme blends community, XTR token and NFT technology to create the new future of digital collectibles of virtual real estate.

## Xtreme NFT Marketplace :

We will have the online NFT collection where creators display their NFT. Through collaboration with real estate companies, we will host different digital collectibles representing real estate projects.

## Benefits:

Hold and Earn XTR  
token

Partial Ownership

Secondary Market  
Access

# Xtreme Tokonomics

**Token Name :** Xtreme Token

**Token Symbol :** XTR

# Utility of Xtreme Token

---

## Exchange of Assets

\$XTR can be used as medium of exchange of various digital assets traded with in the platform.

## Governance Voting

\$XTR holders can raise the critical opinion on the platform for new features, reward program, and key decision.

## Discounted Service

\$XTR holders have privilege on getting discount on the service offered by Xtreme Ecosystem, For example : Users can get discount on marketplace for the service offers to \$XTR payment.

## Activity Rewards

Platform users can earn additional \$XTR as activity rewards when participating on staking program and referral program

# Xtreme Roadmap
